

The check is complete.

How complete is the check?

Complete

Everything planned was checked. Nothing is open.

What we need from you

Nothing. This is for your information.

The working summary starts on the next page.

Summary

The token bucket now refills from a monotonic clock, and the distributed path is unchanged.

The rate limiter now refills from a monotonic clock, so a wall-clock adjustment can no longer hand a caller a full bucket. The distributed path is unchanged and its contention under fan-out remains unmeasured.

Not covered

– Not examined, per the closeout: The distributed path still shares one Redis key per tenant; its contention under fan-out is unmeasured.

Assessment

What changed

The token bucket now refills from a monotonic clock, so a wall-clock adjustment can no longer hand a caller a full bucket. The burst ceiling moved into configuration; `limiter.New` reads it once at construction rather than per request.

What is not covered

The distributed path still shares one Redis key per tenant. Nothing here changes that, and the contention it causes under fan-out is unmeasured.

Evidence appendix

Evidence	12 records observed, 3 listed

This document is a projection of the run's durable records — its closeout, review verdicts, scan findings, evidence ledger, and visuals — rendered deterministically: the same records produce byte-identical output. The records, not the document, are the record of the outcome.
